SIDE-TILT POST DRIVER

The Malone Farm Machinery Side-Tilt Post Driver can quickly drive the biggest of strainers and gate posts in the toughest of ground conditions. It is engineered to eliminate ground digging & drilling. The frame is made of H-iron beam to provide strength, durability and a long working life.

Features include; Heaviest hammer weight available on the market as standard at 350kgs, steel-wire rope, side tilt adjustment and hydraulic top-link.

It's an ideal machine for cost-conscious farmers and contractors who need the strength and hammer weight of a larger machine to drive larger posts & straining posts, while having the simplicity and cost-effectiveness of a smaller machine.

This is a high-impact machine that will drive the heaviest of straining and gate posts with ease and can readily be operated by one person. A 3-lever control chest valve enables the post driver to move smoothly left and right, (Side-Tilt/Levelling) forward and back (Hydraulic Top-Link). This 360-degree movement makes easy work of placing posts, even on steep inclines and uneven ground.

Operation The steel wire rope is hoisted / tensioned by the hydraulic ram thus moving the hammer up. As the 350-kg hammer is released, it impacts the rubber protected hat, thus driving the fence post. Posts are driven straight to ground, protected & secured by the special spiked hat.

The Malone Post driver is equipped with safety guards and is CE Safety approved.

**QUICKLY DRIVE
THE BIGGEST
OF STRAINERS
AND GATE
POSTS**
